AMENDMENTS

In the Specification

The following is a marked-up version of the specification with the language that is underlined ("___") being added and the language that contains strikethrough ("——") being deleted:

For the paragraph beginning on page 15, line 5:

As shown in FIG. 10, GUI 1000 can enable functions typically provided by print driver interfaces. In addition thereto, and/or in lieu thereof, GUI 1000 can provide a print authorization actuator 1010, an identification information actuator 1020 and an associated information field 1030. In operation, a user can associate previously stored identification information associated with the user with information that the user intends to print by actuating the print authorization actuator 1010. If, however, previously stored identification information is not available or if the user desires not to use previously stored identification information, the user could actuate the identification information actuator 1020. Once actuated, the user could provide the desired identification information within field 1030. Upon actuating the "okay" actuator 1050, the information to be printed as well as the information corresponding to the authorization of the user, *i.e.*, the identification information, is enabled to be sent to the printing device.
